DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 4. Claim(s) 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Koch (US 2004/0111269 A1) in view of Lee et al. (US 6,882,838 B1).

Application/Control Number: 10/807,159

Art Unit: 2645

Regarding **claim(s) 1 and 15**, Koch discloses a method for executing an advanced intelligent network service provided in a public switched telephone network (FIG. 1 and paragraph 1), the method comprising:

forwarding a message from a service control point (SCP 310 on FIG. 3) to a voice extensible markup language platform (VXML gateway 312 on FIG. 3), the message comprising an announcement (FIG. 3 and paragraphs 0042 and 0043); and

playing the announcement, wherein the announcement stored at the remote location can be created or changed by a subscriber without affecting the announcement identification (FIG. 3 and paragraphs 0043 and 0048).

Koch discloses an SCP sending the announcement to the platform but fails to disclose an announcement ID to the platform.

However, Lee teaches analyzing the announcement identification, at the VXML platform, to determine a remote location where an announcement corresponding to the announcement identification is stored (column 8, lines 1-16).

Therefore, it would have been obvious to one of the ordinary skill in the art at the time the invention was made to modify the invention of Koch using the teaching of call disposition service as taught by Lee.

This modification of the invention enables the system to send an announcement ID to the platform so that the user would have the advantage of listening of the special announcement.

Regarding **claim(s) 2, 9 and 16**, Koch discloses a method, in which the VXML platform comprises an intelligent peripheral component and a VIMS component (FIG. 1 and paragraph 0036).

Regarding **claim(s) 3, 10 and 17**, Koch discloses a method, further comprising receiving the announcement identification at the IP component (FIG. 1 and paragraph 0035);

encoding the announcement identification so that the IP component recognizes that the VIMS component will process the announcement identification (FIG. 1 and paragraph 0035); and

forwarding the announcement identification to the VIMS component (FIG. 1 and paragraph 0035).

Regarding **claim(s) 4 and 11**, Koch discloses a method, further comprising, at the VIMS component, correlating the announcement identification to the announcement location (FIG. 1 and paragraph 0035).

Regarding **claim(s) 5, 12 and 18**, Koch discloses a method, in which the correlating is based upon a server location identification provided in a subscriber profile (FIG. 1 and paragraph 0042).

Application/Control Number: 10/807,159 Page 5

Art Unit: 2645

Regarding **claim(s)** 6 and 13, Koch discloses a method, in which the remote location comprises a web server (FIG. 1 and paragraph 0040).

Regarding **claim(s) 7 and 14**, Koch discloses a method in which the web server is identified by a uniform resources locator (FIG. 1 and paragraph 0038).

Regarding claim(s) 8, Koch in combination with Lee disclose all the limitations of claim(s) 8 as stated in claim(s) 1's rejection and furthermore Koch discloses a service control point (310 on FIG. 3) and a voice extensible markup language (312 on FIG. 3).

Regarding **claim(s) 19**, Koch discloses a voice extensible markup language platform, in which the VXML platform communicates with the service control point using intelligent network application part signaling (FIG. 1 and paragraph 0035).

Regarding claim(s) 20, Koch discloses a voice extensible markup language platform, in which the VXML platform communicates with a web server storing the announcement in order to play the announcement (FIG. 1 and paragraph 0038).

Response to Arguments

5. Applicant's arguments with respect to **claim(s) 1-20** have been considered but are most in view of the new ground(s) of rejection.

Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gerald Gauthier whose telephone number is (571) 272-7539. The examiner can normally be reached on 8:00 AM to 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Fan Tsang can be reached on (571) 272-7547. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
